**Executive Summary for scottyab/rootbeer repository**

Introduction

This report seeks to demonstrate and identify the authors for the scottyab/rootbeer repository with the most commits. This report seeks to shine a light on those that are working hard and contributing to the repository, while also revealing some areas of improvement that are needed for the scottyab/rootbeer development team.

Findings

Over the past 325 weeks(roughly 6 years), the scottyab/rootbeer team has seen many authors contribute commits. Notably, we have seen Matthew contribute the most commits across many different source files. He has committed 79 different times to the repository, and has done so at the beginning of the project, as well as the most recent commits have been primarily by him. We also have seen another star, Scott Alexander-Bown, who has committed 67 times to the repository. Here we see the graph of commits over time, and by whom.

Commits by Author on Files in scottyab/rootbeer

We also see some authors who haven't committed recently, or very frequently. Notably, we see Andy Barber, who has only committed 3 times, and the last time was in 2016.

Useful Git Commands

In creating this summary, I used **git push** to push my python scripts that I created to the repository. I also used **git pull** to synchronize my changes with the rest of my team. I used **git add** and **git commit** to create my commits that had my updates to the scripts I wrote. I used **git checkout** and **git branch** to create my own working branch.
